Summarize the document (ID) into an attack report
The logs indicate a series of suspicious activities primarily executed by the process svchost.exe across multiple incidents on September 24 and 25, 2019.
The attack appears to have been executed in a systematic manner, ... The consistent interaction with the IP address 202.6.172.98 raises significant concerns regarding data exfiltration. ....

Filter Hallucinations
Summarize all reports into a comprehensive attack report
The attack began with the execution of svchost.exe, which was frequently used to create shells and establish outbound communications with known malicious IP addresses, specifically 202.6.172.98 and 142.20.57.246. This behavior suggests the establishment of a command and control channel, indicative of an initial compromise. The attacker executed commands to create and manipulate processes, including the creation of multiple files and modules, which points to efforts to maintain persistence on the compromised system.
Indicators of Compromise (IOCs):
IP Addresses : 202.6.172.98 (C&C server) / 142.20.57.246
Processes : svchost.exe / powershell.exe / plink.exe / lsass.exe / wmiprvse.exe / winlogon.exe / cmd.exe
